ABOUT US

Since the company was founded in 2003, more and more people are choosing Wellis products around the world. The increasing demand for a healthy lifestyle increases the demand for quality wellness products as well. Thanks to our dedication to continuous development and growth, Wellis has now become the largest hot tub manufacturer on the European market and already has a significant share in the American market.

We produce hot tubs, swim spas, their associated thermal covers, and spa side cover panels at a plant with a total area of 30,000 m². The construction and continuous expansion of this huge plant, which is equipped with modern production tools, was motivated by the growing market demand, and our commitment to quality in manufacturing technology. Our products are stored in several warehouses. We currently sell 30.000 Wellis hot tubs per year at more than 1000 points of sale worldwide.

"I was an active teenager; I traveled the world and was continuously on the hunt for new business opportunities. First, I worked on importing jeans from Asia, but I always wanted to learn and expand. Ultimately, my real success in business came when my brother and I started selling spas and together we created Wellis, Europe's leading hot tub company. In the beginning, we imported spas and hydromassage tubs as ready-made, pre-assembled products. The year 2010 became a gigantic milestone for Wellis and for us, as it was when we started manufacturing spas. We started building the factory in the spring of 2008, and a few months later, the global financial crisis broke out. And then the great economic recession started. Everyone tried to talk me out of starting to manufacture hydromassage hot tubs in the

We have been developing our new product line for more than 3 years. Countless licences, thousands of work hours, and a multitude of our own innovations, that we are already extremely proud of, will be represented in our new models. Faithful to our company, we want to introduce excellent, user- and environmentally friendly products to the market, as it is increasingly important to us to pay special attention to the needs of our customers, and the same time protect the environment. The primary goal of our company is to provide exceptional wellness experience for our customers using as little energy as possible. There will be significant changes in the technological structure of our hot tubs while they will also get a renewed design.

middle of the crisis, as they absolutely count as luxury items. The opposition included the company's management. They also didn't endorse starting manufacturing, but I decided to go for it. To put it delicately, neither starting to make the products, nor introducing our own hot tubs to the European market was easy. Fortunately, our gamble worked out and the rest is history. Our efforts were rewarded with much success and manufacturing products ended up pulling the company out of the crisis. As our next great leap, I suggested we try to expand into the American market — the native land of hot tubs.

We have been growing our roots here and have been working to introduce the brand named Wellis to America. Parallel to expanding our business in the US, we would like to continue to grow overall. It is our passion to be on the cutting edge, but it's also an enormous responsibility!"

Zsolt Czafik CEO and Akos Czafik CEO
of Wellis Hungary

Instead of being merely a long-term vision, a sustainable economy has become part of everyday life at Wellis. In the last few years, our company has placed increasing emphasis on the elements of an environmentally friendly and sustainable model.

Our efforts are based on two essential pillars: The first is to optimize our production process and the second is to educate our customers about energy and water-saving aspects, giving special consideration to environmental factors.

Here are some processes which were introduced into the daily life of our company

- Reusing unnecessary materials with a special shredder.
- Production of abs (acrylonitrile-butadiene-styrene) from recycled plastic.
- Using low consumption pumps in hot tubs.
- Various developments in the name of renewable energy, such as integrating solar systems into our products.
- Reducing transport routes around the world and coordinating production and sales activities.
- Developing New, energy-efficient hot tubs

GREEN ENERGY

SUSTAINABLE PRODUCTION TECHNOLOGY

SAVE THE RAIN FOREST

In the process of our manufacturing technology, we pay special attention to environmental awareness, so we completely eliminated the use of wood during the production and replaced it with recycled materials.

This is how we protect our rainforests and nature. In order to achieve the most effective recycling, Wellis is not afraid of technological innovations either.

QUALITY ASSURANCE

Wellis quality is continuously benchmarked against the highest German production standards under the TÜV Certification protocol that we subscribe to. This ensures we constantly meet and exceed all relevant international standards.

We are proud of this commitment to excellence and the clear differentiation from our market competitors that it affords us.

Our TÜV certificate guarantees that our products are of excellent quality and are regularly and independently monitored to meet and exceed the highest manufacturing standards. The CE label on all of our products assures our customers that the design and build meet or exceed all relevant EU standards.

PRODUCT WARRANTY: PEAKLIFE & SWIMLINE SERIES:

7 years on the shell structure of the spa

5 years on the cabinet of the spa

5 years on the control box and the display module

5 years no-leak plumbing warranty

CITYLIFE & COLD PLUNGE LINE:

5 years on the shell structure of the spa

3 years on the cabinet of the spa

3 years on the control box and the display module

3 years no-leak plumbing warranty

THE RESULT OF 3 YEARS OF DEVELOPMENT

The Wellis R&D team has been working for 3 years on the new product portfolio, which is poised to revolutionize the hot tub industry.

61 patents are already registered in Europe and 14 in the US. Wellis also has a world patent for our electric water diverter. Our many technology breakthroughs have resulted in energy-efficient and environment-friendly solutions.

ENVIRONMENTAL AWARENESS

SAVING ENERGY

Our goal is to find energy efficient solutions while also focusing on sustainability and environmentally conscious production technologies. It became obvious that our new and renewed products would also be produced by these standards.

This is the reason our new line was named Life. The name will be displayed by both our product families: PeakLife and CityLife.

ELECTRONIC WATER DIVERTER

WOW SYSTEM

Our improved electric water diverter replaces the large manual diverter. Our new device performs the same function and comes with a small control panel for ease of use.

The electric water diverter makes for a gentler massage experience because after activation, the speed of the water increases gradually. Through automation, we've built a new massage experience into the hot tub.

The gradual changing direction of the massage every five seconds, creates a pulsing effect, providing an even more invigorating feel than a traditional massage.

For the water current, we combined the massage strength of two older-model massage pumps in one by straightening the pipes and installing the new water diverter. In this way, the consumption of energy

while in use has been reduced to half the previous amount. Wellis' energy-efficient water diverter is patent registered in 152 countries.

Compared to our competitor's solution, it has 23% higher pressure with approximately 30% less energy consumption.

Moreover, we compared it to our previous models, and the results were that it has 75% higher pressure with approximately 41% less energy consumption

EVEREST with old water diverter

New Life Line Video

SMARTPHONE APPLICATION

Control your spa from home or while you are on the road with the Wellis Smartphone™ app!

Available for both iPhone and Android smartphones. Set the desired temperature and other functions from your phone, before you head over to the holiday house, so that by the time you arrive you will have a heated, ready-to-use spa waiting for you, providing you with all the benefits and positive effects of a Wellis hydromassage.

NEW LIFE SCANDINAVIAN INSULATION

All our spas have received a new type of Life Scandinavian insulation. These insulation boards have been inserted into the spa's support frame, rather than being attached to the exterior cladding. The insulation is dimensionally accurate for the frame's inner measurements and can be easily installed or uninstalled.

The foam insulation under the rim has also been exchanged for an aesthetically more pleasing Life insulation.

In some of our premium Life pools, we have used the best possible insulation material in the tray instead of the previous polyfoam insulation: air. We achieved this by installing an ABS sheet near the bottom plate, creating insulating air pockets.

SMART-IN STEP SYSTEM

The heat pump can be stowed under the larger step. The heating of the water can be maintained more cost efficiently, without affecting the product's aesthetics.

The Smart-In Step system, equipped with a built-in heat pump, is designed to help maintain a comfortable water temperature, even during the hot summer months. In showroom tests, it cooled water to approximately 68°F. Inside the stairs, we have designed storage compartments where bathers can store towels or water treatment products. Additionally, our PeakLife models are equipped with a USB socket for mobile phone charging.

WATER CLARITY

Every Wellis hot tub is equipped with a multi-stage filtration and hygiene system that ensures crystal clear water with minimal effort. The process begins with our special antimicrobial filter inserts. The energy-efficient eco-water circulation motor filters the water through these filters, which capture tiny particles. The antimicrobial coating helps to eliminate any contaminants that have adhered to the filtered particles, preventing them from settling in the water, and ensuring the filters are easy to clean and reusable.

While the hot tub water can be safely treated with just traditional chemicals, the electronic hygiene device significantly reduces the required amount of these chemicals, thus improving water quality

for bathers. Every hot tub we manufacture is equipped with this device: WellisGuard™ system. Our filters ensure the water is cleaned multiple times daily, leaving no residue at the bottom of the hot tub. Our antimicrobial hot tub filter inserts are designed to trap contaminants in the water and can be easily rinsed off during cleaning.

CRYSTAL CLEAN SYSTEM

Thanks to the 2" diameter pipe, our motor circulates more water and does so faster thus, filtering the water more rapidly.

The new circulation jet has been designed to have 3 zones.

Two of these zones direct the water downwards to stir up heavier debris that has settled in the footwell of the hot tub.

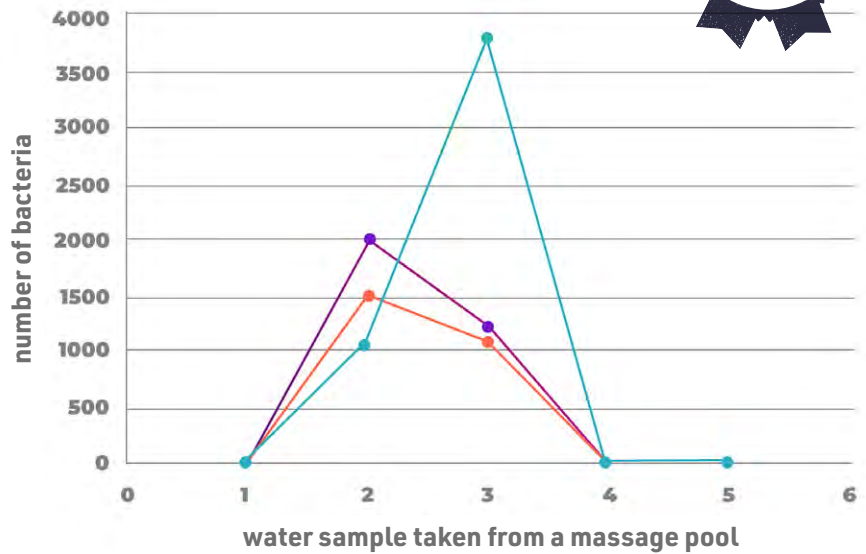

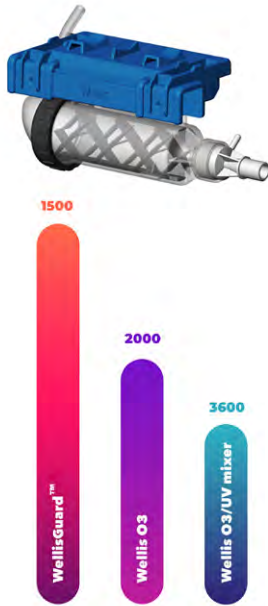

The third zone helps direct the flow toward the filtration system.

WELLISGUARD™ SYSTEM

The tests conducted during Wellis' development work have shown that the systems we use have proven to be the most effective solution. To enhance water clarity and freshness, we developed the WellisGuard™ system, which has proven to be the most effective when used with chlorine and the appropriate amount of pH regulator. Thanks to our system, less chlorine is needed compared to traditional systems, making the hot tub water more pleasant and crystal clear.

Our goal is to achieve the best possible cleaning method and reduce the amount of chemicals currently used. The WellisGuard™ system is currently under patent.

IN-LINE WIS PRO

- This useful, built-in accessory provides 24-hour monitoring of your spa's water quality status via your smartphone.
- The machinery also provides the exact and required amount of chemicals.
- Since this is a built-in system, it does not disturb us during rest, it is a completely new system, developed by Wellis

SOUND SYSTEM

AQUASOUL™ PRO 4.1 AND 2.1 SOUND SYSTEM (PEAKLIFE OPTION)

Experience the cutting-edge Wellis AquaSoul™ Pro sound system, featuring state-of-the-art, waterproof components designed for seamless integration with today's technology. Forget about outdated mp3 players and wired connections – the built-in Bluetooth receiver allows for wireless streaming directly from your mobile device. Choose from the powerful 4.1 system, which includes a 288 W subwoofer and four concealed 30 W speakers, or the compact 2.1 system with two integrated 30 W speakers, ensuring pristine audio quality for any setting.

MYMUSIC™ 2.0 SOUND SYSTEM (CITYLIFE OPTION)

Immerse yourself in the myMusic™ 2.0 sound system, crafted with the latest waterproof technology to deliver superior sound quality. With no need for external devices, connect effortlessly to the built-in Bluetooth receiver from your mobile phone. This system simplifies your audio experience while maintaining high fidelity sound, making it perfect for any modern lifestyle.

FUTURE OF DESIGN

LIGHTSIDE™ SPA CABINET

Wood-like, wide horizontal side and corner bars. These elements add an intimate atmosphere to the appearance of the spas. The cabinets are available in grey and brown color. Besides this, our new spa side cabinet's futuristic look instantly flies us into the future. An LED strip runs along the side of the spa cover (PeakLife). The newly developed corner elements give a more modern and futuristic look to our new range of hot tubs.

Ultra soft pillows

NECK MASSAGE & HEADREST

The neck massage and headrest take your daily stress off your shoulders and neck with their advanced ergonomics and more comfortable design. The design of the headrest follows the line of the neck and head, creating a cradle so you can relax even more comfortably in our hot tubs.

WATERFALL

Sit under the cascading water and enjoy a soothing neck and shoulder massage. This blissful water feature is a new development for Wellis. There is no other product on the market like it.

Waterfall

PeakLife filter housing

FILTER HOUSING

Our custom-made filter housing has an outstanding design and complements the overall aesthetic of the hot tub. Filters can be replaced easily in one easy step.

∞ 7" ROTATING INFINITY JET

We specially designed the 7" rotating infinity jet. This jet makes the experience even more enjoyable by massaging a larger portion of the body. Rather than just moving up and down, it draws a figure eight as it rotates.

Infinity Jet

EXCLUSIVE LIGHTS COLOR THERAPY

Exclusive Lights color therapy is based on the belief that colors and colored lights can have a positive impact on a person's physical and mental health. Various scientific studies have shown a relationship between the human body and specific colors.

Green - Calming
 Blue - Relaxing
 White - Productivity
 Yellow - Energy

Red - Stimulating
 Orange - Positivity
 Pink - Healing
 Indigo - Peaceful

COLOR THERAPY MOOD-LIGHTING

When connected to Wellis control panels, including the SmartTouch systems, the Exclusive Lights system can be easily controlled. While the SmartTouch interface allows for personalized settings with an infinite range of colors and dimming intensity, other control panels offer the capability to step through colors, though with a more limited selection. The Exclusive Lights system can enhance the spa experience by illuminating three lighting zones: central lighting, Exclusive waterline LEDs, Illuminated control valves, cabinet and corner lighting.

EVENLIGHT JETS

At Wellis, we came up with countless patents for our new models, one of which was for lighting jets. The jets illuminate not just themselves, but also the surface around them.

The interior of the spa is sleek and modern in its appearance and is like upright in a spaceship. There is nothing else like this on the hot tub market. The lighting jets not only give the spa a more modern appearance, but also a larger lighting surface.

ILLUMINATED CONTROL VALVES

The Illuminated control valves element is located under the accents, the cup holder, water features, and the filter housing. You can control them all at the same time. This lighting illuminates in harmony with the jets and exterior lighting.

LIGHTSIDE™ CABINET SYSTEM (PEAKLIFE)

The LightSide™ cabinet system appears in Wellis' new spas, which includes hidden lighting under the corner elements, and an in-house developed LED strip, which runs along the side cabinet of the hot tub. The integrated LED strip gives a special atmosphere while relaxing.

WELL LIGHTING

Some spas have central, underwater lighting that works in harmony with the jet lighting to colour the water throughout the pool.

MASSAGE OF WELLIS

RELAX MASSAGE SEAT

This seat targets the regeneration of the shoulder girdle and the longitudinal trunk muscle tissues, as well as the hip flexor muscles and the knee extensor muscles — the muscle groups most exposed to everyday strain.

EXPERT MASSAGE SEAT

This seat's adjustable jets offer physiological effects, with customized directional and strength control.

COOL DOWN MASSAGE SEAT

The armchair design provides relaxation after training. In addition to the physiological recovery offered, its overall calming effects are also significant.

FOCUS MASSAGE SEAT

This seat offers its user an experience similar to the "Expert" effect, relaxing the longitudinal trunk muscle tissues, and passively activating the hip and thigh flexor and extensor muscle groups.

BODY FLOW MASSAGE SEAT

This is the massage seat with the most intensive physiological effect. In addition to affecting the trunk's muscle tissue, it also positively impacts venous and lymphatic circulation in the lower limbs, bringing relief to vein valves.

INTENSO MASSAGE SEAT

This is the most refreshing massage seat and is a favorite of professional athletes. Intenso is ideal for recovery after an intense training session, working the most critical areas, the back and leg muscles.

Wellis®

StreamLife swim spa

w-flow

In a traditional swim spa, the user has to switch on/off the pumps manually for finding the proper water flow which fits their fitness level. The Stream Life swim spas is equipped with brand new swim software. Combining this and the new W-flow system the new Stream Life swim spas became a professional training appliance. The user can choose six-speed levels from the slowest, most comfortable „floating” to the hardest exercise. Similarly to a modern treadmill, you can predefine the swimming speeds one after another, so you can insert slower stages between the swimming sprints. The flow rate can be adjusted 0.4-2.5 km / h.

Riverjet

THE NEW RIVERJET COUNTERCURRENT SYSTEM

The new riverjet counter-current hot tubs are designed to provide a perfect swimming experience. The jets can be adjusted up or down, allowing you to control the direction of the water flow. This way, you can set the counter-current that offers the best swimming experience for you.

Endless Summer Vibes Meet Ultimate Convenience

– Relaxation Awaits!

Year-Round Comfort

The 4 kW heating system raises water temperature above 86°F for all-season use.

Smart Control from Anywhere

Standard in Premium models, optional in Deluxe models. Control heating, lighting, and cleaning remotely via mobile app.

Countercurrent System – Swim Without Limits

2 pumps in Deluxe models, 3 in Premium models, ensuring continuous flow even for professional swimmers.

Sunbathing Cover & Easy Maintenance

The foldable cover doubles as a sunbed while allowing quick service access without a technical pit.

Durable Acrylic Shell

Available in Sky Blue and Ice White with a 7-year warranty for long-term quality.

Sky Blue

Ice White

Quick Installation

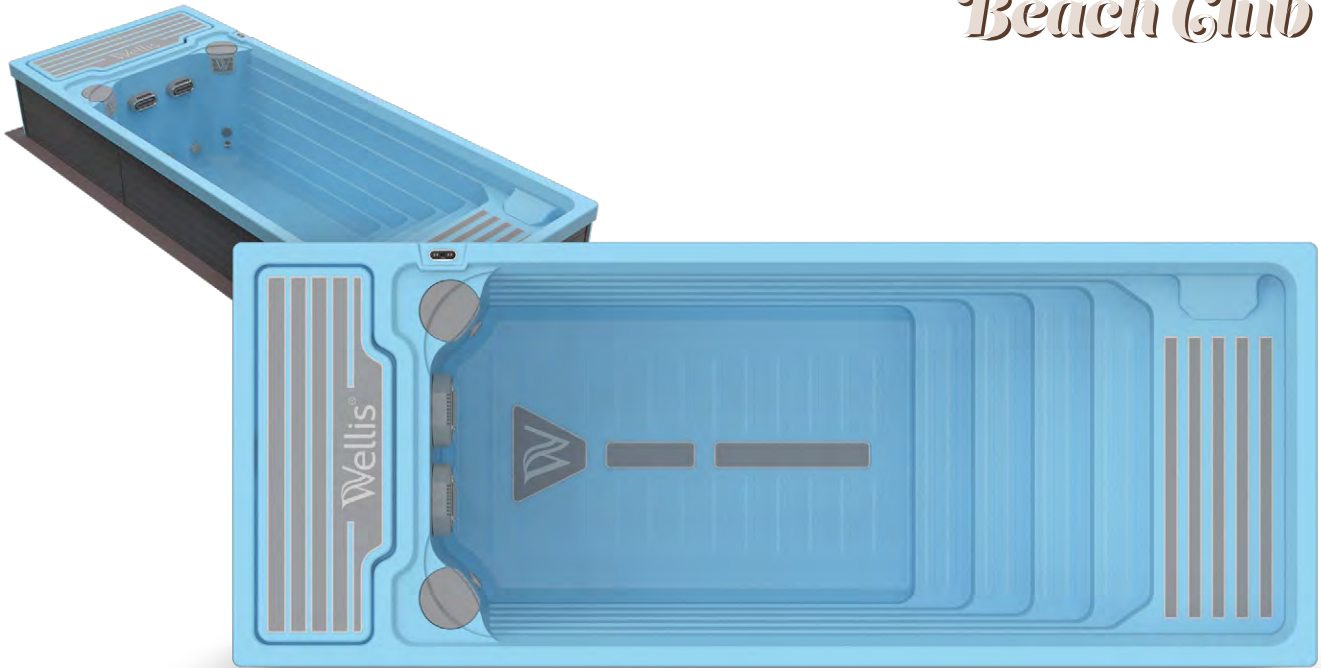

Stainless steel frame and durable ABS casing allow for installation in just one day, without a technical pit.

Water Surface Sunbed

Relaxation and play in one – perfect for families with young children and carefree unwinding.

Iceland cold plunge

Iceland
cold plunge tub

Iceland – Cool&Heat pump

COOL/HEAT Pump (38–100°F) 4kW – 20CR3-SB

The Iceland Cool&Heat Pump is capable of cooling water down to 38°F. Its safe operating temperature range is between 38°F and 100°F, in line with U.S. recommendations. It can chill 26,42 gallons of 73°F water to 41°F in as little as one and a half hours at an ambient temperature of 59°F. When desired, the water can also be heated up to 100°F for a relaxing soak. With a heating COP value of 4.05, it can deliver 2.1 kW of energy using just 500W of input power. Settings can be easily adjusted via the digital control unit or remotely using a smartphone app.

Experience the benefit of a Cold Water Immersion (CWI) with the Wellis Iceland Cold Plunge Tub. With this tub, you can chill your water to as low of 38°F or heat it to as warm as 100°F.

With LED lights inside the tub and on the outside panel, you can enjoy ambiance while recovering in one stylish unit.

The installation of this Plug and Play tub is ever so easy. Simply drop it in place, fill with water, set the temperature and enjoy the benefits of CWI with Wellis Iceland.

INCREASES ENERGY AND ALERTNESS

Cold water can significantly boost your energy levels and enhance alertness. The sudden drop in temperature stimulates your body, increasing your metabolism and triggering the release of endorphins, which are natural mood enhancers. This leaves you feeling energized, awake, and better able to focus throughout the day.

REDUCES STRESS AND ANXIETY

Immersing yourself in cold water can help reduce stress and anxiety levels. The initial shock of cold water causes the body to release adrenaline and cortisol, the primary stress hormones. However, over time, regular cold water therapy can help lower the production of these hormones, resulting in a calmer and more relaxed state of mind.

IMPROVES IMMUNE SYSTEM FUNCTION

Regular cold water immersion has been shown to strengthen the immune system. The body's response to cold water includes an increase in the production of white blood cells and other immune cells that help fight off infections. This boost in immune cell production can lead to improved overall immunity and a reduced risk of illness.

SUPPORTS FAT LOSS AND METABOLISM

Cold water immersion has been linked to increased brown fat activity in the body. Brown fat burns energy to produce heat, which can help boost metabolism and support weight loss over time. Many professional trainers recommend cold plunges as a complementary tool for fat reduction and body recomposition. When practiced regularly, it may become a powerful ally in achieving and maintaining a healthy weight.

TRANSFORMS YOUR LIFESTYLE

Incorporating regular cold water therapy into your routine can lead to significant improvements in your overall health and well-being. From physical benefits like reduced pain and inflammation to mental benefits like enhanced mood and reduced stress, cold water immersion can make your life healthier and more enjoyable. Give it a try today and experience the transformative effects for yourself!

REDUCES SWELLING AND PAIN

Cold water immersion helps reduce swelling and pain in muscles and joints by constricting blood vessels and decreasing blood flow to the affected areas. This process helps alleviate inflammation, making it a great option for those dealing with arthritis, muscle soreness, or joint pain.

MotionFlex

Bioclimatic Pergola

The motorized control placed on the roof structure allows for easy adjustment of the position of the aluminum louvers to reflect harsh sun rays, permit diffused sunlight, provide complete protection against rain and snow, or even ensure uninterrupted ventilation preventing the air beneath the pergola from warming. Thanks to the bioclimatic pergola, we can relish the outdoors in every season. Regardless of weather changes, we can enjoy the outdoor spaces while using the hot tub or even while relaxing on stylish garden furniture. The pergolas are equipped with rgb LED lighting, serving as evening mood lighting, thus ensuring a comfortable outdoor experience even during the evening hours.

BIOCLIMATIC PERGOLA

- matte anthracite grey (RAL 7016) solid aluminum structure, with radiused edges
- motorized matte anthracite grey (RAL 7016) aluminum louvers (24V, IP67), remote controlled
- integrated water drainage channel
- rgb LED lighting, remote controlled (24V)
- column size: 4.72 x 4.72 inch, 0.055 inch wall thickness
- maximum load capacity: 2.20 lbs / 10.76 ft²

MotionFlex 300, 400

SpaGrip spa mounted

This powder-coated, rust-free handrail, partially covered with anti-slip foam, can be mounted on the side panel of any spa. It ensures a comfortable and safe way to get in and out of the spa.

SpaGrip floor standing

The floor-standing version of SpaGrip can be clamped under the spa and attached to the side cover. It guarantees a convenient and secure way of entering and exiting the spa, while can be replaced when not needed.

TowelBar

Crafted from sleek, black powder-coated aluminum, TowelBar holds your towels just a short distance away from splashing water. When not in use, it conveniently folds flat against your spa. With quick and easy installation, it is compatible with almost any spa model.

Spaziano tray

With its sturdy construction and 360° rotation, Spaziano tray offers a versatile and hassle-free way to store snacks, drinks, reading materials, and other essentials while enjoying your spa experience.

WelliStep

The hassle-free spa step that requires no maintenance, featuring a UV resistant plastic construction, a weight capacity of 265 lbs, anti-slip rubber treads, and dimensions of 28×24.5×16.7 in.

Swim spa stairs

Dimension with rail: 58×65×36.8 in.
Dimension without rail: 58×30.3×34.7 in.

Smart-In Step

Smart-In Step with heat pump storage compartment. In PeakLife spa models, additional functions are available, such as a USB socket and LED lighting that can be integrated into the Exclusive Lights color therapy.

Heat pump

You can significantly reduce your spa's heating costs thanks to the latest coolant and high-quality compressor. The reinforced fan reduces the noise level and vibration of the device.

Spa booster pillow

This comfortable pillow fits any spa; it can be fixed and adjusted to the water level. Sturdy, heat resistant material, easy to fill, standard pipe fitting, suction cup for non-slip feature.

Automatic water hardness or PH value meter

With this equipment, you can constantly check the water hardness and PH level of your spa-water and ensure the correct chemical composition.

Floating chemical dispenser

It ensures a steady flow of chemicals. The chemical in the dispenser does not come into contact with the hot tub shell, therefore there is no damage or discoloration. Multi-stage, adjustable chemical dispensing.

Filter cleaning device

The purpose of the Wellis filter cleaning device is to clean your spa filter in a flash.

Spa wand

With the hand-held Spa wand vacuum spa cleaner, you may collect impurities from the bottom of the spa, the steps or the surface of water – without having to drain the water. It is delivered with special heads.

Manual filter cartridge cleaner

The filters can be cleaned simply and quickly with the manual filter cartridge cleaner. Eight lamellas can be cleaned at the same time without splashing; it can be connected to the garden hose.

Spa-cleaning glove

This glove uses microfibre technology to lift dust and dirt from surfaces with a soft touch, preventing scratches and tarnishing.

Spa cover wipes

Spa cover cleaning wipes are designed to clean your spa or hot tub cover removing dirt and stains without the need of additional cleaning agents.

Spa cleaning disc

Eliminates water-surface oils & reduces scum line formation. Absorbs scum, oily residue including body oils, suntan lotion. Improves filter performance.

Easy cover lifter

With the use of the Easy cover lifter, one person can easily remove the thermo cover. It fits all spa sizes. Durable, powder-sprayed surface. Non-slip handle.

Universal cover lifter

Removing the cover is easier than ever with the universal cover lifter. In order to ensure proper operation, there must be a space of at least 24 in. between the side of the spa and the wall. Can be used with Xtreme™ thermo cover as well!

FROG @ease floating sanitizing system

How many times have you thought, "this hot tub is just too much work!" We set out to change that with FROG @ease. Up to 75%* less chlorine. Easy on hot tub surfaces with less odors. Single color match for easy reading. No constant monitoring. No mixing chemicals.

FROG @ease floating smartchlor cartridge 3 pack

FROG @ease combines our sanitizing minerals with SmartChlor® Technology to kill bacteria 2 ways. Shock only once a month. Self regulates for continuous crystal clear water. Easy on hot tub surfaces with less odors.

FROG maintain hero 12 pack

Hot tub shocking is easier with FROG® Maintain™ non-chlorine shock. Ongoing maintenance shock. One dose delivers clean crystal-clear water. Maintain the clean, without the chlorine or Cyanuric Acid.

FROG @ease test strips (30 bottle)

Quick and easy – just dip, shake and get an accurate reading in 2 seconds. A simple Go/No Go out indicator for SmartChlor makes testing fast and easy. Also tests for pH, Total Alkalinity and Hardness.

Active charcoal filter for spas

When your spa is filled through an active charcoal pre-filter, you get crystal clear bathwater. Sufficient for pre-filtering 2,100 gallons water.

Water softener for spas

If your spa is filled with demineralized water using this resin-filled pre-filter, it will prevent limestone buildup on mechanical devices, thus increasing their service life.

Antibacterial filter cartridges

Paper filters with an antibacterial coating, whose fibers with an increased surface area are capable of multiplying the performance of a traditional filter cartridges.

Aroma liquid for spas

Liquid aroma for spas 8.5 oz eucalyptus, lavender, mediterranean, orange bloom, rosemary.

Rollcover

Explore our newest product addition, the swim spa roll covers that is crafted to enhance your spa experience on select models: Olympus, Danube, Amazon, Rio Grande, Elba and BeachClub.

Key Features:

- Durable and lockable, designed to withstand any weather condition.
- UV protected for longevity and appearance maintenance.
- Easily roll off in under 60 seconds, simplifying your spa experience.
- Compatible with optional shelf brackets for added functionality.

Thermal cover

The purpose of using the thermo cover is to maintain the set temperature of the spa water. Thermal insulation is achieved through a special foam layer, which is covered with a UV-resistant artificial leather cover on the outside. The thermo cover is 4.72 inch thick in the middle and slopes towards the edges of the spa (2.76 inch), allowing rainwater to easily drain off.
